Plugins

Descriptions and downloads for ImageJ plugins stored here. There are many more plugins in the ImageJ website.

Acquisition

- ImageJVI

Aligning

- Align_4
- Align_RGB_planes
- Align_Slice
- bUnwarpJ: consistent and elastic registration
- Image Stabilizer

Analysis

- AATAP
- Analyze Skeleton (2D/3D)
- Automatic detection of neuronal labeling in histological image series
- Bitmap Sholl Analysis
- Chamfer Distances and Geodesic Diameters
- ClonalTools (analysis of mosaic images)
- Confined Displacement Algorithm Determines True and Random Colocalization (CDA)
- Feature Finder (Template matching)
- Frap_Norm (FRAP measurement and normalization)
- FRAP Analysis (analysis of FRAP experiments)
- Fourier Shape Analysis
- Green and Red Puncta Colocalization
- HeatMap Histogram
- Intravoxel Incoherent Motion (IVIM) Analysis and ADC analysis
- JACoP (Just Another Co-localization Plugin)
- Lipid Droplet (or any other spots) Counter
- Lemos Asymmetry Analysis (asymmetry measurements from dental panoramic radiograph images)
- PoissonNMF: Linear unmixing without reference spectra
- ShapeLogic categorizer: Machine learning or rule based
- MSCS (Micropatterned Single Cell Sorting)
- 3D Object Counter
- 3D Roi Manager
- 3D Analysis
- 3D Mereotopology
- 2D/3D Spatial statistics
• **MetroloJ**
  - OpenMIMS (open, process and analyze images captured with NanoSIMS 50 & 50L secondary ion mass spectrometers)
  - Radial thickness measure
  - SarConfoCal (Simultaneous Fluorescence and Sarcomere Length Measurements from LSCM Images)
  - SarcOptiM (High Frequency Online Sarcomere Length Measurement)
  - Time gated phasor
  - Three-way PCA
  - TTorg (Transverse tubular system regularity analysis)
  - Wand Tracker (track objects by selecting them with the magic wand)
  - Microscope Image Correlation Spectroscopy
  - Neurite-J. Sholl analysis for organotypic cultures
  - Find minimum and maximum
  - FLEYE, ommatidia analysis
  - 3D tissue organisation

**Collections**

• **MiToBo - a microscope image analysis toolbox** (basic image processing tools, active contours, cell/nuclei/neurite segmentation, scratch assay analysis, ...)

**Color**

• [Chart White Balance](http://imagejdocu.tudor.lu/)
• Colour Deconvolution
• Color Pixel Counter
• Lut Panel
• Threshold Colour
• Color Deconvolution: Optimizing handling of 3D unitary optical density vectors with polar coordinates
• Channel Merger
• Conversions between RGB color space and Lab color space
• Set minimum and maximum values for LUT

**Filters**

• Digital Darkfield Decomposition
• Edge Detection
• Expression
• Fast Filters
• Fit_Polynomial
• Highpass filter
• Hill Shade
• MRI Processor
• Nonuniform Background Removal
• Periodic_Boundary_Blur
- Surface Blur
- Thresholded Blur
- 3D Filters
- 3D Fast Filters with JNI
- Differential contrast enhancement
- Line Lab selective median filtering
- Lab non-local mean with same pixel luminance neighborhood

### Input / Output

- Animated PNG Writer
- Bio-Formats
- CBF Reader
- HPGL Reader
- LSM Reader
- LSMToolbox
- Metamorph nd & ROI files importer (nd stack builder)
- Okolab Data Import
- Perkin Elmer Reader
- PGM 16 bit exporter
- SIMS_Toolbox
- TomoI
- The Tudor DICOM Toolkit
- Pt3Reader, a Picoquant .pt3 files importer

### Morphology

- Morphological Operators for ImageJ
- Non binary Morphological Operators for ImageJ
- Fast Morphological Filters
- Mitochondrial Morphology
- 2D/3D Skeletonization
- 3D Mathematical Morphology
- Euclidean minimum spanning tree
- Apoptosis Macro

### Segmentation

- Active Mask Segmentation (2D)
- Active contour (Snake)
- Adjustable Watershed
- Hysteresis thresholding
- LiveWire Plugin
- Morphological Segmentation (2D/3D)
- Simple Image Pixel Editor
- Spectral Phasor
- Thresholding by connection
**Plugins**

- Threshold Colour
- Versatile Wand
- Yawi 2D (Wand)
- 3D Segmentation
- Chow and Kaneko binarization
- jSLIC superpixels

**Stacks**

- Attenuation Correction
- Frame Projector
- HeatMap From Stack
- HyperVolume_Browser
- Image5D
- Image Stabilizer
- Image Stack Merger Plus
- MicroSCoBioJ
- Multiple Image Stack Operator
- Nonuniform Background Removal
- Computing a normal map from a 3D surface and several lightings (Polynomial Texture Mapping)
- NucleusJ
- Perkin Elmer Reader
- Plot stack points
- Stack Fitter
- 3D Filters
- 3D Tools
- 3D ImageJ Suite

**3D Modelling**

- Fractal3D
- TrakEM2
- PhantomaJ

**Utilities**

- Action Bar
- Alpha Channel
- Annotation ROI 3D
- Bezier Curve ROI
- Cairn Image Splitter
- ContMensili (update 05 mar 2011)
- Droplet: a Drag and Drop image processor
- FigureJ: easy article figures
- JJ Ed (jEdit for ImageJ)
- Imageflow
- IJUpdate
Plugins

- IJProxy
- Live Macro (experiment with a webcam and macro language)
- LSM Toolbox
- MidiJ - Midi Plugin for ImageJ
- MRI Cell Image Analyzer
- MVFG - Multi-format Video Frame Grabber
- Multi Undo
- NeuronPersistentJ
- PDF macro extension
- PixelInspector
- Python DM3 Reader
- Quadratic Curve ROI
- Save All
- Seam Carving
- Serial Macro extensions
- SynapCountJ
- TAPAS
- Wait_For_User
